Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: Claims 1-51 are allowable over prior art references because related references do not disclose determining a count of the number of received symbols in a predetermined number of received symbols that fall within one or more predetermined collection areas located on a symbol constellation defining a plurality of symbols, wherein the one or more predetermined collection areas are exclusive of the plurality of symbols defined by the symbol constellation, associating the count with a value, from which an estimated SNR - related parameter is derived, using one or more lookup tables, and processing one or more symbols, received over the communication channel, using the SNR-related parameter. Related references also do not disclose determining a count of the number of received symbols in a predetermined number of received symbols that fall within one or more predetermined collection areas having a size, associating the count with a value, from which an estimated SNR - related parameter is derived, using first and second lookup tables, wherein each entry in the first table is the probability (or count) of a received symbol falling into the one or more collection areas at a given value of the SNR - related parameter, which comprises a corresponding entry in the second table. Related references further do not disclose determining a count of the number of received symbols in a predetermined number of received symbols that fall within one or more predetermined collection areas having a size, associating the count with a value, from which an estimated SNR - related parameter is derived, using first and second lookup tables, wherein at least the first lookup table depends on a symbol constellation and the size of the one or more collection areas.
